06 Installation and uninstallation

01 / UNDERSTANDING GLOW

GLOW at a glance.

Brightness and width for your vocals.

GLOW creates harmonics by saturating high frequencies. It adds air, brightness and presence to vocals, complementing EQ. Stereo uses subtle modulation to spread these harmonics across the stereo field and give them movement.

**1** GLOW

Sets the amount of added brightness.

2 Stereo

Sets the width of the effect.

3 Output

Sets the output level.

Good to know

GLOW has zero latency, so you can use it while recording or mixing. The three dots at the top right open the menu.

02 / USING GLOW

Set up GLOW.

In your DAW, adjust the brightness first, then the width.

01 Add GLOW to a vocal track.

When using GLOW as an insert, leave Wet Only off.

02 Gradually turn up the GLOW knob.

Add air and brightness. Lower the setting if the vocal becomes harsh or sibilance becomes too prominent.

03 Adjust Stereo and compare.

Set the width with Stereo. Adjust Output to compare the processed and unprocessed vocal at the same loudness. Use your DAW's bypass.

Starting point

Intermediate

High setting

Adjusting Stereo

Low Stereo

A subtle, more focused effect.

High Stereo

A wider effect with more movement.

What to check

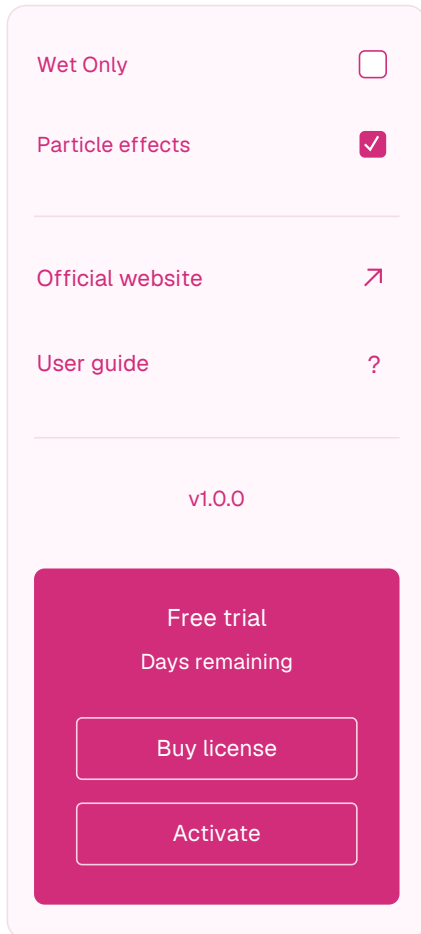

The vocal's place in the mix and how it sounds in mono.

Compare with and without the effect on headphones and speakers.

03 / MENU AND OPTIONS

The GLOW menu.

Click the three dots at the top right of the plug-in.

Menu diagram.

Wet Only

Leave it off when using GLOW as an insert. On an effects return, enable it to output only the effect, then adjust the return level.

Particle effects

Shows or hides the interface particles.

Official website

Opens the Mixfield Plugins website.

User guide

Opens this user manual.

Version

Displays the installed version number.

Free trial

Shows the number of trial days remaining.

Buy license

Opens the website to purchase a license.

Activate

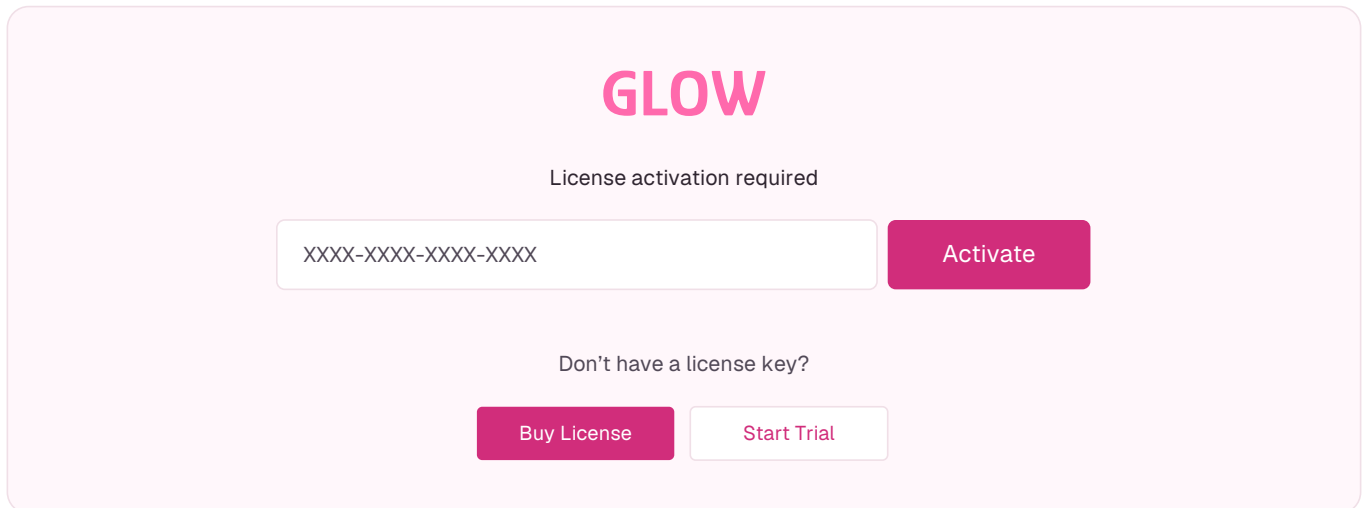

Lets you activate your license after purchase.

Trial and purchase information is shown according to your license status. The version number depends on your installation.

04 / LICENSE AND TRIAL

Activate your license.

Activate your license or start the free trial.

Example activation screen.

01 Copy your license key.

Use the key you received after purchase.

02 Paste the key into the field.

Click Activate.

03 Check that GLOW is activated.

Open GLOW in your DAW. The activation screen should no longer appear.

Try GLOW

Click Start Trial to try GLOW for free. No card is required. The trial duration is shown in the plug-in.

Buy a license

Purchase a license using Buy License or the official website, then activate your key to keep using GLOW after the trial.

05 / INSTALLATION AND UNINSTALLATION

Install GLOW.

The steps depend on your system, plug-in format and DAW.

01 Download GLOW.

Get the latest version from the official website.

02 Close your DAW and install GLOW.

Open the installer and follow the on-screen instructions.

03 Reopen your DAW.

Run a plug-in scan in your DAW.

04 Add GLOW to a vocal track.

Activate your license or start the free trial.

Uninstall GLOW

Close your DAW. Remove the GLOW file from its installation folder. Reopen your DAW, then run another plug-in scan.
