

LIFT

User manual

Pitch-following dynamic vocal EQ

Clarity. Presence. Balance.

One control. Let your ears decide.

06 Installation and uninstallation

01 / UNDERSTANDING LIFT

One control. All you need.

Preset processing that adapts to the voice in real time.

LIFT is a relative dynamic equalizer with pitch tracking. It reduces muddiness and boxiness, helps manage proximity effect, and improves vocal clarity and brightness. Its zero-latency processing also makes it suitable for use while recording.

**1** LIFT

Processing amount.

2 Output

Output level.

3 Menu

Options and activation.

Perceptual AutoGain

Perceived loudness stays consistent as you increase the processing amount. Adjust Output if needed to compare at the same perceived loudness.

02 / USING LIFT

Set, listen, compare.

Find the right balance in the context of your mix.

01 Insert LIFT on your vocal track.

Load the plug-in as an insert in your DAW.

02 Gradually increase LIFT.

Listen for more clarity and presence. Stop before the voice becomes too bright, harsh or unnatural.

03 Match the level and compare.

Adjust Output, then use your DAW's bypass to compare the processed and unprocessed signals at the same perceived loudness.

Starting point

Intermediate

Beyond 100%

Listening tips

Dull vocals Add openness without emphasizing sibilance.

Boxy vocals Reduce low-mid buildup while preserving body.

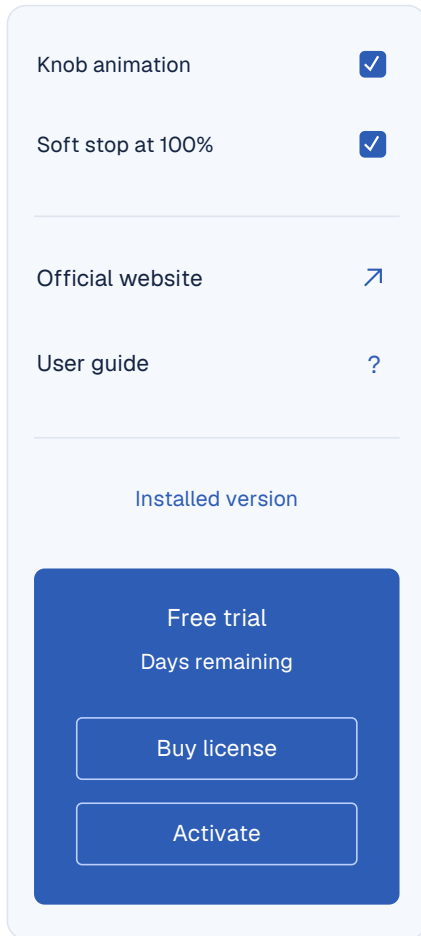

Highly dynamic vocals Adjust gradually to preserve expression.

Compare using bypass. Try LIFT before or after your other processors.

03 / MENU AND OPTIONS

Options made simple.

Open the menu using the three dots at the top right of the interface.

Menu diagram.

Knob animation

Enables or disables the animation around the main knob.

Soft stop at 100%

Enables or disables the soft stop when moving past 100%.

Official website

Opens the Mixfield Plugins website.

User guide

Opens the user manual.

Version

Displays the installed plug-in version.

Free trial

Shows the number of trial days remaining.

Buy license

Opens the website to purchase a license.

Activate

Lets you activate your license after purchase.

Version, trial and purchase information depends on your installation and license status.

Activate your license.

Use LIFT with an activated license or during the trial period.

The diagram shows a light blue rectangular box representing the LIFT startup screen. At the top center, the word "LIFT" is displayed in a large, bold, blue font. Below it, the text "Licence activation required" is centered in a smaller, dark gray font. Underneath this text is a white rectangular input field containing the placeholder text "XXXX-XXXX-XXXX-XXXX". To the right of the input field is a blue rectangular button with the word "Activate" in white text. Below the input field and button, the text "You don't have any licence key?" is centered in a small, dark gray font. At the bottom of the box, there are two buttons: a blue "Buy License" button and a white "Start Trial" button with a blue border.

Diagram of the startup screen shown when LIFT is not activated.

01 Copy your license key.

Use the key you received after purchase.

02 Paste it into the activation field.

Then click Activate to validate your license.

03 Check activation in your DAW.

Open LIFT and check that the activation screen no longer appears.

Try LIFT

Click Start Trial to begin the free trial. No payment card is required. Check the trial duration shown in your plug-in version.

Buy a license

Click Buy License or visit the official website to purchase a key and keep using LIFT after the trial ends.

05 / INSTALLATION AND UNINSTALLATION

Install LIFT.

The exact steps may vary depending on your system, plug-in format and DAW.

01 Download the latest version.

Use the download page on the official website.

02 Close your DAW and install.

Open the installer and follow the on-screen instructions.

03 Reopen your DAW and scan for plug-ins.

Restart your DAW and run a plug-in scan.

04 Load LIFT on a vocal track.

Activate your license or start the free trial.

Uninstall LIFT

Close your DAW. Remove the plug-in file from its installation folder, then restart your DAW and run another plug-in scan.
